LEARNING CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

LEARNING is INTEL applied. Every discovery governed. Every gradient evidenced.

Contents

INTEL is the primitive what you KNOW (= WORK). LEARNING is the service governed discovery extraction at scale. IDFs (Invention Disclosure Forms) are the archetype: structured records that capture what was discovered, when, by whom, with what evidence. LEARNING generalizes this pattern beyond patents to ALL governed scopes.

---

1. Constraints

```
MUST:     Compose INTEL primitive  every discovery evi
MUST:     Follow governed record shape (generalized ID
MUST:     Source from governed operations only  no fab
MUST:     Backpropagate gradients to upstream scopes
MUST:     Every scope has LEARNING.md  the pattern tab
MUST:     LEARNING.md pattern table: Date | Signal | P
MUST:     Ingest LEDGER streams  TALK, CONTRIBUTE, EMA
MUST:     Every ingested LEDGER entry becomes a LEARNI
MUST NOT: Fabricate discoveries
MUST NOT: Store unstructured data outside governed rec
MUST:     GC frozen epochs  after rotation, delete the
MUST NOT: Bypass provenance chain  every gradient trac
MUST NOT: Ignore LEDGER streams  silence is not govern
MUST:     Flat service layout  no singleton stage dire
MUST:     CAS fanout  git-style 2-char prefix buckets
MUST:     Manifest sharding  one shard per signal type
MUST:     Incremental discovery  checkpoint per repo,
MUST NOT: Store 100K+ entries in a single manifest fil
MUST NOT: Store 100K+ files in a single flat CAS direc
MUST:     Consume patterns  build reads LEARNING.md ba
MUST:     Surface regression signals  repeated DEBIT:D
MUST:     Surface growth signals  repeated MINT:WORK o
MUST:     Feed INTEL  consumed patterns wire into syst
MUST NOT: Capture without consumption  write-only LEAR
```
