PRIMITIVES CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

INTEL, COIN, and TALK are the three native primitives of the GALAXY operating surface.

Contents

1. Constraints

```
MUST:     INTEL pane renders scope intelligence (summa
MUST:     INTEL pane is actionable (coverage gaps show
MUST:     COIN bar shows wallet balance in control pan
MUST:     COIN bar supports transaction feed (mints, s
MUST:     COIN bar shows scope-level economy when view
MUST:     TALK interface replaces search dock at botto
MUST:     TALK supports dual mode: search (default) an
MUST:     TALK carries current scope context in every 
MUST:     TALK streams responses via SSE in expandable
MUST:     TALK recognizes governance commands (create 
MUST:     All three primitives update contextually on 
MUST:     TALK responses that reference scopes are cli
