Hadley Lab CANONIC

Abstract

GTM is COIN about MAGIC how the enforcement layer executes in the market, starting from a beachhead and expanding concentrically.

Contents

- **GTM_IS_COIN_ABOUT_MAGIC** go-to-market is the COIN projection of MAGIC: commercial execution governed by the same primitives as the product.
- **BEACHHEAD_FIRST** GTM starts from a position of proven strength (healthcare AI governance) and expands concentrically, never all industries at once.
- **CONCENTRIC_EXPANSION** each expansion adds incremental regulatory knowledge already captured in INDUSTRIES (healthcare finance government defense general enterprise). ## Axioms

0.1 1. Beachhead Strategy

Go-to-market MUST start from a position of proven strength and expand concentrically.

Example: MAGICs beachhead is healthcare AI governance: - **Why healthcare**: Highest regulatory density (HIPAA + FDA + CMS + state law + clinical evidence + interoperability). Most dimensions required simultaneously. MAMMOCHAT proves production readiness. AdventHealth validates enterprise deployment. - **Concentric expansion**: Healthcare Financial services (SOX + SEC) Government (FedRAMP + FISMA) Defense (CMMC + ITAR) General enterprise (EU AI Act). - **Why this order**: Each expansion adds incremental regulatory knowledge already captured in INDUSTRIES. HealthcareFinance shares HIPAA/SOX audit trail patterns. FinanceGovernment shares compliance framework patterns. GovernmentDefense shares NIST/CMMC foundations. - **Anti-pattern**: Dont try to be everything to everyone at launch. MAGIC governs 13 industries but enters through ONE.

0.2 2. Channel Strategy

Distribution MUST match buyer acquisition economics for each tier.

Example: Three channels by tier: - **COMMUNITY/BUSINESS (35-43)**: Product-led growth.

Free tier self-serve upgrade. GitHub presence. Developer documentation. Content marketing (blog, whitepapers, conference talks). Community Slack. Cost of acquisition: <$500. - **ENTERPRISE (63)**: Direct sales. Account executives with healthcare/compliance domain expertise. Conference presence (HIMSS, RSNA, AMIA). Analyst briefings (Gartner, KLAS, Frost & Sullivan). Advisory board referrals. Cost of acquisition: $15K-$25K. - **AGENT/FULL (127-255)**: Strategic sales. Executive relationships. Board-level introductions. Partnership with system integrators (Deloitte, Accenture health). Government procurement (GSA Schedule, SBIR/STTR). Cost of acquisition: $50K-$100K.

LTV:CAC target: >5:1 across all channels. Enterprise LTV = $100K/year Œ 5 years Œ 1.3 expansion = $650K. CAC must stay <$130K.

0.3 3. Partnership Strategy

Partnerships MUST accelerate distribution without sacrificing governance integrity.

Example: Four partnership tiers: - **Technology partners**: EHR vendors (Epic App Orchard, Cerner Open), cloud providers (AWS Healthcare, Azure Health, GCP Cloud Healthcare API). Integration = distribution. MAGIC becomes the governance layer ON their platform. - **Channel partners**: System integrators (Deloitte, Accenture, Booz Allen for defense). They implement; MAGIC provides the governance platform. Revenue share: 20-30% of first year. - **Academic partners**: Medical schools, research institutions (Penn, Stanford, UCSF, UCF). Publication pipeline validates clinical governance. Grants (NIH SBIR/STTR) fund R&D. Students become advocates. - **Standards bodies**: HL7/FHIR, GA4GH, CARIN Alliance, ONC. Participation in standards development embeds MAGICs governance approach into industry standards. Standards adoption = market adoption.

0.4 4. Regulatory Strategy

MAGIC MUST achieve its own regulatory credentials to sell regulatory governance.

Example: MAGICs regulatory roadmap: - **SOC 2 Type II** (Year 1) table stakes for enterprise sales. Demonstrates security, availability, confidentiality controls. 6-12 month observation period. Estimated cost: $50K-$100K. - **HITRUST CSF** (Year 1-2) healthcare-specific certification harmonizing HIPAA, NIST, ISO. Required by many health systems. Estimated cost: $100K-$200K. - **FedRAMP** (Year 2) required for government cloud services. Impact Level Moderate initially. Estimated cost: $500K-$1M. Opens $120B government IT market. - **FDA** (Year 2-3) if MAMMOCHAT pursues CADx/CADe classification, De Novo or 510(k) pathway. Estimated cost: $500K-$2M. Differentiation: first AI governance platform with FDA clearance. - **ISO 27001** (Year 1) international information security standard. Required for EU market entry. Estimated cost: $50K-$100K.

Eat your own dog food: MAGIC must score 255/255 against its own governance. Every certification is documented in MAGICs COVERAGE.md.

0.5 5. Launch Sequence

Market entry MUST follow a sequenced plan that builds credibility before scaling.

Example: MAGIC launch sequence: - **Phase 0 Stealth** (Complete): Patent provisionals filed. MAMMOCHAT in production. Core IP protected. - **Phase 1 Foundation** (Q1-Q2 2026): 501(c)(3) or C-corp incorporation. SBIR/STTR applications submitted. SOC 2 Type II engagement started. 3-5 healthcare pilot customers signed. - **Phase 2 Validation** (Q3-Q4 2026): First paying enterprise customers ($100K+ contracts). Case study published with clinical outcome metrics. HIMSS presentation. Analyst briefing (KLAS/Gartner). - **Phase 3 Scale** (2027): Series A ($5-10M). Sales team (3-5 AEs). Channel partnerships activated. Second vertical (financial services) entered. $2-5M ARR. - **Phase 4 Expansion** (2028): Government/defense entry (FedRAMP). International (EU AI Act compliance). $15-30M ARR. 50+ enterprise customers. - **Phase 5 Platform** (2029+): MAGIC BYOL (Bring Your Own Language). Third-party governance app marketplace. $50-100M ARR. Category leader.

0.6 6. Success Metrics

Go-to-market execution MUST be measured against defined KPIs with accountability.

Example: MAGIC GTM scorecard: - **Pipeline**: $3M qualified pipeline by Q2 2026. $10M by Q4 2026. - **Revenue**: $500K ARR by Q2 2026. $2M ARR by Q4 2026. $5M ARR by Q2 2027. - **Customers**: 3 paying enterprise by Q2 2026. 10 by Q4 2026. 25 by Q2 2027. - **Expansion**: >30% net revenue retention (NRR > 130%). - **Efficiency**: LTV:CAC > 5:1. Payback period < 18 months. - **Product**: 255/255 magic validate on every customer deployment. Zero governance failures in production. - **IP**: 6 provisionals 3 utility patents filed by Q4 2026. First patent granted by 2028. - **Regulatory**: SOC 2 Type II by Q4 2026. HITRUST by Q2 2027.

---

1. Constraints

```
MUST:     Start from healthcare beachhead  expand concentrically
MUST:     Achieve own compliance credentials before selling compliance
MUST NOT: Scale sales before product-market fit is validated with 5+ paying customers
MUST: MAGIC must score 255/255 against its own governance before selling compliance to others
```
