

ANDROID CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

MAGIC on Android is native, governed, fast.

hadleylab.org Governed Research. Every claim cited.

Contents

1 Constraints

1

The Android surface is a 1:1 projection of the web surface: same GOV, same lanes, same outcomes. Rendering is native Kotlin + Jetpack Compose. Governance is compiled upstream. API layer is shared.

1. Constraints

- MUST: Pure Jetpack Compose no WebView bridges
- MUST: All data from api.canonic.org no direct ext
- MUST: CANON.json bundled in APK + refreshed at lau
- MUST: canonic-sdk Kotlin module for all API calls
- MUST: Session tokens in EncryptedSharedPreferences
- MUST: GitHub OAuth via Custom Tabs (not WebView)
- MUST: SSE streaming via Ktor (no polling)
- MUST: Accessibility: TalkBack labels, 48dp touch t
- MUST: Material You theming from CANON.json design
- MUST: Google Play Internal Testing gated by magic
- MUST: Read governed config at runtime (no baked co
- MUST: Delegate validation and scoring to governed
- MUST NOT: Ship provider lists, thresholds, or lane map
- MUST NOT: Ship without 7-day Internal Testing validati
- MUST NOT: Third-party UI frameworks (pure Compose)
