

APPLE CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

MAGIC on Apple is native, governed, fast.

hadleylab.org Governed Research. Every claim cited.

Contents

1 Constraints

1

The iOS/Mac surface is a 1:1 projection of the web surface: same GOV, same lanes, same outcomes. Rendering is native SwiftUI. Governance is compiled upstream. API layer is shared.

1. Constraints

- MUST: Pure SwiftUI no WebView bridges, no Electron
- MUST: All data from api.canonic.org no direct ext
- MUST: CANON.json bundled in binary + refreshed at
- MUST: CanonicSDK Swift Package for all API calls (
- MUST: Session tokens in Keychain (not UserDefaults
- MUST: GitHub OAuth via ASWebAuthenticationSession
- MUST: SSE streaming via URLSession + AsyncSequence
- MUST: Accessibility: Dynamic Type, VoiceOver label
- MUST: Universal app iPhone + iPad + Mac from sing
- MUST: TestFlight gated by magic validate = 255 equ
- MUST: Read governed config at runtime (no baked co
- MUST: Delegate validation and scoring to governed
- MUST NOT: Ship provider lists, thresholds, or lane map
- MUST NOT: Ship without 7-day TestFlight validation
- MUST NOT: Third-party UI frameworks (pure SwiftUI)
