Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

Every new scope enters the world the same way.

hadleylab.org Governed Research. Every claim cited.

Contents

1 Constraints

1

Initialization is a governed process. A scope is not born partial it bootstraps through phases, each phase validated, until it reaches MAGIC 255. The INIT contract ensures no scope is hand-created, no TRIAD is incomplete, and no inherits path is left unresolved.

1. Constraints

- MUST: Scaffold TRIAD first (CANON.md + VOCAB.md + 1
- MUST: Resolve inherits path before generating COVER
- MUST: Promote through tiers in order (COMMUNITY B
- MUST: Validate 255 before merge no partial scopes
- MUST: Generate scope slug from directory name (SCR
- MUST: INIT is idempotent running twice produces t
- MUST NOT: Hand-create partial scopes use the INIT pip
- MUST NOT: Skip TRIAD every scope needs CANON + VOCAB
- MUST NOT: Create scopes with broken inherits paths
