

TESTS CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

Compiler correctness is verified by deterministic fixture tests. Given a known GOV input, the compiler MUST produce the expected JSON output.

hadleylab.org Governed Research. Every claim cited.

Contents

Constraints

- MUST: Every fixture is a self-contained scope with
- MUST: Expected output strips volatile fields (_gen
- MUST: Test runner discovers fixtures by walking n
- MUST NOT: Allow compiler regressions to reach deploy
