1

STAR is the governed personal cloud. GALAXY shows the organizational topology. STAR shows the personal topology. Every USER gets a STAR. The TIMELINE joins all temporal data across all three primitives into one chronological stream.

1. Constraints

- MUST: Compose all three primitives (INTEL + CHAT + ...)
- MUST: Discover USER's GOV tree via magic scan never
- MUST: TIMELINE is a read-only JOIN across existing
- MUST: TIMELINE envelope compatible with LEDGER .id
- MUST: Every lane WIRES to existing services never
- MUST: Auth-gate all personal data (VAULT, WALLET, ...)
- MUST: GOV lane is public (compliance rings are the
- MUST: Discover services via magic scan (TALKS/*/CA)
- MUST: Aggregate LEARNING patterns from all user sc
- MUST: Surface compliance ring (8 MAGIC dimensions)
- MUST: Publish STAR-TIMELINE.json via build pipelin
- MUST: NETWORK service declare routes on api.canon
- MUST NOT: Write to source event streams (VAULT, LEDGER
- MUST NOT: Duplicate WALLET, SHOP, VITAE, or LEARNING s
- MUST NOT: Hardcode lane sources discover via GOV tree
- MUST NOT: Expose private data (VAULT, CALENDAR, NOTIFI
