Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

FFI = Foreign function interface. Kernel. Bare metal.

hadleylab.org Governed Research. Every claim cited.

Contents

Compliance runtime for foreign function interface. C implementation.

Neofunctionalized from Rust for universal FFI across all runtimes. C ABI is the universal bridge between language runtimes.

Constraints

1. C MUST validate against SPEC.
2. C MUST implement the full compliance specification.
3. C MUST provide FFI bindings for other runtimes.
4. C SHOULD enable kernel-level compliance.
