

USERS CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

USERS are GitHub identities projected into ORGs.

hadleylab.org Governed Research. Every claim cited.

Contents

A USER can appear (duplicate) across many ORGs. The duplication is a feature: each ORG owns its USER projection and can revoke it.

Constraints

MUST: Treat GitHub account identity as the initial
MUST: Require ORG membership for USER projection in
MUST: Allow the same USER slug to exist across many
MUST: Map each USER projection to a repo inside the
MUST: Bind USER signing key to VITAE and verify sig
MUST: Support revocation by removing org membership
MUST NOT: Collapse USER identity into a single global v
MUST NOT: Treat runtime deploy repos as identity source
