

MINT CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

MINT bridges WORK and ATTENTION to WALLET. Gradients mint COIN. Reads mint COIN. Every mint ledgered.

hadleylab.org Governed Research. Every claim cited.

Contents

Constraints

MUST: Mint on every non-zero LEDGER gradient git work
MUST: Mint on RUNNER task completion task evidence
MUST: MINT:READ on reader attention 1 COIN to author
MUST: Amount = gradient (delta) for git work, fixed
MUST: MINT:WORK on positive gradient, DEBIT:DRIFT on negative
MUST: MINT:READ dedup by session hash same reader
MUST: Map git identity to USER principal via identity.json
MUST: Map RUNNER identity via identity.json Linker
MUST: WARN visibly when identity unresolved no signature
MUST: Be idempotent same .idf never mints twice (same task-ref)
MUST: Be idempotent same task-ref never mints twice (same read session)
MUST: Be idempotent same read session never mints twice
MUST: Record idf_id, task-ref, or read session as v
MUST: USER must be registered (identity.json + WAL) before minting
MUST: Ed25519-sign all events after SIGNATURE_CUTOFF
MUST NOT: Mint without evidence (no .idf, no task-ref, no read session)
MUST NOT: Mint to unknown USER (identity must resolve to known USER)
MUST NOT: Mint absolute score gradient only (for git work)
MUST NOT: Double-mint on commit amend, hook re-run, duplicate
MUST NOT: Charge readers to read reading is free, authors to publish
MUST NOT: Charge authors to publish writing is free
