

CANONIC-C CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

C is the kernel runtime bare-metal compliance and the universal FFI bridge every other runtime crosses.

hadleylab.org Governed Research. Every claim cited.

Contents

- **FFI_IS_KERNEL** the C implementation is the foreign-function-interface kernel: bare metal, no abstraction tax.
- **C_ABI_IS_UNIVERSAL_BRIDGE** the C ABI is the universal bridge between language run-times, exported as FFI bindings for all peers.
- **NEOFUNCTIONALIZED_FROM_RUST** C is neofunctionalized from Rust for universal FFI, preserving the full compliance specification.
Constraints

1. C MUST validate against SPEC.
2. C MUST implement the full compliance specification.
3. C MUST provide FFI bindings for other run-times.
4. C SHOULD enable kernel-level compliance.
