

PROGRAMMING CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

PROGRAMMING hosts the language runtimes all compliant, all neofunctionalized from a shared INTEL family.

hadleylab.org Governed Research. Every claim cited.

Contents

- **DEV_IS_RUNTIMES** programming-language implementations live here; each language is a peer runtime under a shared inherits chain.
- **RUNTIME_FAMILY_IS_INTEL** all runtimes descend from the INTEL family by neofunctionalization, not by independent reinvention.
- **ALL_RUNTIMES_COMPLIANT** every runtime validates through the magic binary; no runtime ships below 255. ## Constraints
 1. MUST maintain inherits: chain for all language implementations
 2. MUST validate runtime compliance through magic binary
 3. SHOULD keep language implementations flat (one repo per language)
 4. MUST NOT hardcode governance logic outside the kernel (magic.c)
