

CANONIC-TYPESCRIPT CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

TYPESCRIPT is the web runtime wrapper governed web and frontend integration around the MAGIC kernel.

hadleylab.org Governed Research. Every claim cited.

Contents

- **TYPESCRIPT_WRAPS_KERNEL** the TypeScript runtime wraps kernel interfaces without duplicating enforcement logic.
- **WEB_IS_GOVERNED** web and frontend integration projects through TypeScript with full governance parity to other runtimes.
- **INTERFACE_CONTRACTS_STABLE** TypeScript exposes stable interface contracts so consumers can depend on them across versions. ## Constraints
 1. TYPESCRIPT MUST wrap kernel interfaces without duplicating enforcement.
 2. TYPESCRIPT MUST preserve governance parity with other runtimes.
 3. TYPESCRIPT SHOULD expose stable interface contracts.
