

PROTECTION CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

PROTECTION is transport-layer enforcement no commit reaches main without passing the 255 gate.

hadleylab.org Governed Research. Every claim cited.

Contents

- **BRANCH_IS_GATED** magic-validate must pass and at least one approving review must land before merge to main; administrators do not bypass.
- **MAIN_IS_IMMUTABLE** force pushes and branch deletion are blocked for main in every GOV repo.
- **CODEOWNERS_ENFORCED** a CODEOWNERS file maps all paths to reviewers so every change has an accountable reviewer. ## Constraints

MUST: Require magic-validate status check to pass
MUST: Require at least one approving review before
MUST: Block force pushes to main in all GOV repos
MUST: Block branch deletion for main in all GOV repos
MUST: Enforce status checks for administrators (no
MUST: Maintain CODEOWNERS file mapping all paths to
MUST NOT: Allow direct push to main without PR (except
MUST NOT: Allow --no-verify to bypass pre-commit hooks
