

SEMANTIC CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

SEMANTIC is validation beyond shape vocabulary closure, inheritance integrity, and coverage alignment.

hadleylab.org Governed Research. Every claim cited.

Contents

- **VOCAB_CLOSES** every SCREAMING_CASE term in CANON.md resolves in local or inherited VOCAB.md; stubs (or placeholder definitions) are gaps, not closures.
- **INHERITANCE_RESOLVES** every inherits: path points to an existing CANON.md; resolution cascades upward until resolved or flagged.
- **COVERAGE_REFLECTS_REALITY** COVERAGE scores align with evidence: dimension PASS requires the evidence file to exist and contain substance; empty files cannot claim PASS. ## Constraints

MUST: Close vocabulary every SCREAMING_CASE term
MUST: Resolve inheritance chains every inherits p
MUST: Align COVERAGE scores with reality dimension
MUST: Flag stub terms VOCAB definitions of "" or
MUST: Cascade resolution upward if a term is not
MUST NOT: Claim COVERAGE PASS for dimensions backed by
MUST NOT: Allow circular inheritance inherits chains
MUST NOT: Silently ignore undefined terms every unres
SHOULD: Report cross-scope term drift same SCREAMING
MUST: Circular inheritance is rejected every chain mu
