

COMPLIANCE CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

COMPLIANCE is the tier algebra cumulative governance surfaces, monotonic inheritance, no weakening allowed.

hadleylab.org Governed Research. Every claim cited.

Contents

- **TIER_IS_ALGEBRA** tiers compose mathematically; thresholds and required surface artifacts are declared once in GOV and interpreted by the runtime.
- **TIER_IS_CUMULATIVE** tier gates accumulate from parent to child; children add constraints and never relax them.
- **INHERITANCE_IS_MONOTONIC** inheritance only tightens; no sibling scope duplicates or weakens tier algebra. ## Constraints

MUST: Define tier thresholds and required surface artifacts

MUST: Treat tier gates as cumulative (children add constraints)

MUST: Keep tier rules in GOV; runtime interprets tier rules

MUST NOT: Duplicate tier algebra in sibling scopes

MUST NOT: Tiers are cumulative governance surfaces; inheritance only tightens

MUST NOT: Runtime interprets tier rules but stores tier artifacts
