

PRIMITIVES CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

INTEL, COIN, and TALK are the three native GALAXY primitives not plugins, but pillars every scope composes.

hadleylab.org Governed Research. Every claim cited.

Contents

- **PRIMITIVES_ARE_NATIVE** the three primitives are native to the operating surface; they are not plugins or sidebars bolted onto a graph.
- **EVERY_SCOPE_COMPOSES_THREE** every scope composes all three primitives and all three update contextually when the user navigates.
- **INTEL_IS_KNOWLEDGE** INTEL renders scope intelligence (summary, LEARNING, ROADMAP, COVERAGE) and is actionable, surfacing coverage gaps and ROADMAP status.
- **COIN_TRACKS_ECONOMY** COIN shows wallet balance always and scope-level economy in context, with a transaction feed dropdown.
- **TALK_IS_CONVERSATION** TALK is a dual-mode dock at bottom-center supporting search and conversation, toggled by prefix. ## Constraints

MUST: INTEL pane renders scope intelligence (summary, LEARNING, ROADMAP, COVERAGE)

MUST: INTEL pane is actionable (coverage gaps shown, ROADMAP status, LEARNING)

MUST: COIN bar shows wallet balance in control panel

MUST: COIN bar supports transaction feed (mints, spend, burn)

MUST: COIN bar shows scope-level economy when viewed

MUST: TALK interface replaces search dock at bottom-center

MUST: TALK supports dual mode: search (default) and conversation

MUST: TALK carries current scope context in every response

MUST: TALK streams responses via SSE in expandable sidebar

MUST: TALK recognizes governance commands (create, delete, update)

MUST: All three primitives update contextually on navigation

MUST: TALK responses that reference scopes are clickable

MUST: INTEL coverage gap "fix" button opens TALK with edit

MUST: Every TALK edit operation logs to COIN ledger

MUST: Every action attributed to authenticated GitHub user

MUST NOT: Render primitives as separate pages (they compose)

MUST NOT: Allow TALK editing without authenticated session

MUST NOT: Bypass build pipeline for governance mutations
