

CHAIN CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

CHAIN is WALLET event linkage every event chains to its predecessor, balance is provable, the build gates on chain integrity.

hadleylab.org Governed Research. Every claim cited.

Contents

- **EVENT_CHAINS_TO_PREV** every TIMELINE event includes a prev field (hash of the previous event, or 000000000000 for genesis); no gaps allowed.
- **BALANCE_IS_PROVABLE** the derived balance matches WALLET.json; the chain is verifiable forward from genesis to HEAD.
- **BUILD_GATES_ON_CHAIN** verify-wallet gates the build pipeline; a broken chain is a build failure, not a warning. ## Constraints

MUST: Every TIMELINE event includes prev field hash

MUST: Event ID = SHA256(prev|ts|event|user|amount|)

MUST: Chain verifiable forward genesis to HEAD, no gaps

MUST: Derived balance matches WALLET.json balance

MUST: verify-wallet gates build pipeline broken chain is failure

MUST NOT: Accept unchained events after migration

MUST NOT: Mutate existing TIMELINE entries (append-only)

MUST NOT: Cache balance independently of TIMELINE derivation
