

CLAUDE CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

CLAUDE is the governed agent context surface compilation is graph traversal from the galaxy, with contextual INTEL and optimized LEARNING by distance.

hadleylab.org Governed Research. Every claim cited.

Contents

- **COMPILATION_IS_GRAPH_TRAVERSAL**
the compiler is graph-native; context is compiled by BFS over the galaxy, not by hardcoded paths.
- **GALAXY_IS_INPUT** the galaxy is the input graph; any starting node can compile its own composed instance.
- **DISTANCE_BUDGETS_CONTEXT** budget is controlled by graph distance (d=0 all, d=1 summary, d=2 meta-patterns, d=3 axioms).
- **INHERITS_CROSSES_REPOS** cross-axiomatic INTEL is discovered via INHERITS edges so the compiler traverses across repo boundaries. ## Constraints

MUST: Compile via galaxy graph BFS (graph-native, r

MUST: Carry _generated marker on compiled output

MUST: Budget-control by graph distance (d=0 all, d

MUST: Discover cross-scope LEARNING via BFS

MUST: Discover cross-axiomatic INTEL via INHERITS

MUST: Promote durable ad hoc feedback into governe

MUST NOT: Hardcode scope paths

MUST NOT: Include secrets or credentials in compiled o
