

DEPLOY CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

DEPLOY is governed artifact delivery build validates, deploy ships, rollback recovers, FROZEN stops the line.

hadleylab.org Governed Research. Every claim cited.

Contents

- **BUILD_BEFORE_DEPLOY** never ship unvalidated artifacts; build must pass before deploy runs.
- **DESIGN_DEPLOYS_FIRST** the DESIGN theme deploys before fleet sites because of the remote_theme dependency.
- **DNS_FROM_GOVERNANCE** DNS records are derived from governance, never created manually; FROZEN state blocks deploy unless overridden.
- **ROLLBACK_IS_FIRST_CLASS** every fleet site supports rollback to a previous commit as a first-class operation. ## Constraints

MUST: Build before deploy never ship unvalidated artifacts

MUST: Deploy DESIGN theme before fleet sites (remote_theme dependency)

MUST: Derive DNS from governance never create records manually

MUST: Block deploy during FROZEN state (unless overridden)

MUST: Support rollback to previous commit per fleet site

MUST: Containerize API + vault for production host

MUST: Store CLOUDFLARE_DNS_TOKEN as env secret (Zones)

MUST NOT: Deploy PRIVATE scopes to public fleet

MUST NOT: Skip CI gates for any deploy path

MUST NOT: Hardcode zone IDs discover via API from ##
