

IDENTITY CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

IDENTITY signs and verifies every COIN action signed, every signature verified, keys bound to governed VITAE.

hadleylab.org Governed Research. Every claim cited.

Contents

- **EVERY_ACTION_SIGNED** every circulation event (MINT, TRANSFER, SPEND, SETTLE) is signed by the Ed25519 key-pair generated per USER principal.
- **VERIFY_BEFORE_EXECUTE** signatures are verified before executing privileged actions; no unsigned paths into COIN.
- **KEY_BOUND_TO_VITAE** keys are bound to governed USER VITAE identity; KYC anchors include GitHub (primary) and LinkedIn (distributed users). ## Constraints

MUST: Generate Ed25519 key-pair per USER principal

MUST: Sign all circulation events (MINT, TRANSFER, SPEND, SETTLE)

MUST: Verify signature before executing privileged actions

MUST: Bind keys to governed USER VITAE identity

MUST: Support multiple KYC anchors GitHub (primary), LinkedIn (distributed)

MUST: Onboard distributed users to GitHub as graduate users

MUST: Store private keys encrypted in VAULT (never in plaintext)

MUST: Publish public keys for verification

MUST NOT: Allow unsigned fallback for privileged actions

MUST NOT: Store unencrypted private keys

MUST NOT: Accept expired or revoked auth tokens

MUST NOT: Block distributed users from COIN LinkedIn

MUST: Rotate Ed25519 keys annually document ceremony

MUST: Track key_created_at and warn 30 days before expiration
