

MINT CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

MINT bridges WORK and ATTENTION to WALLET gradients mint COIN, reads mint COIN, every mint ledgered.

hadleylab.org Governed Research. Every claim cited.

Contents

- **GRADIENT_MINTS_COIN** every non-zero LEDGER gradient mints COIN; a git commit produces an IDF and a WALLET credit or debit, with MINT:WORK on positive and DEBIT:DRIFT on negative.
- **TASK_MINTS_COIN** RUNNER task completion mints COIN on task evidence at fixed amounts per category; the task evidence backs the credit.
- **READ_MINTS_COIN** reader attention mints COIN via MINT:READ (1 COIN to author per unique pageview); attention is WORK in the economy. ## Constraints

MUST: Mint on every non-zero LEDGER gradient git commit

MUST: Mint on RUNNER task completion task evidence

MUST: MINT:READ on reader attention 1 COIN to author

MUST: Amount = gradient (delta) for git work, fixed

MUST: MINT:WORK on positive gradient, DEBIT:DRIFT on negative

MUST: MINT:READ dedup by session hash same reader

MUST: Map git identity to USER principal via identity.json

MUST: Map RUNNER identity via identity.json Linker

MUST: WARN visibly when identity unresolved no signature

MUST: Be idempotent same .idf never mints twice (for git)

MUST: Be idempotent same task-ref never mints twice

MUST: Be idempotent same read session never mints

MUST: Record idf_id, task-ref, or read session as evidence

MUST: USER must be registered (identity.json + WALLET)

MUST: Ed25519-sign all events after SIGNATURE_CUTOFF

MUST NOT: Mint without evidence (no .idf, no task-ref, no read)

MUST NOT: Mint to unknown USER (identity must resolve)

MUST NOT: Mint absolute score gradient only (for git work)

MUST NOT: Double-mint on commit amend, hook re-run, duplicate

MUST NOT: Charge readers to read reading is free, attention is free

MUST NOT: Charge authors to publish writing is free
