

SHOP CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

SHOP compiles the public projection aggregate every USER is a SHOP, every artifact has a price, purchase wires to WALLET.

hadleylab.org Governed Research. Every claim cited.

Contents

- **USER_IS_SHOP** every USER principal with artifacts has a SHOP surface; projections are discovered by walking {USER}/**/SHOP.md, not just SERVICES/**/SHOP.md.
- **ARTIFACT_HAS_PRICE** each SHOP product may declare a COIN price; free products omit price.
- **PURCHASE_WIRES_WALLET** purchase creates a SPEND event in the buyer WALLET and a credit in the seller WALLET; aggregation is deterministic and rerun-safe. ## Constraints

MUST: Every USER principal with artifacts MUST have artifacts

MUST: Discover projections by walking {USER}/**/SHOP.md

MUST: Each SHOP product MAY declare a COIN price

MUST: Purchase creates SPEND event in buyer WALLET

MUST: Aggregation is deterministic and rerun-safe

MUST: Drift-gate regenerate before publish, block

MUST: Composable via frontmatter shop: true|inline

MUST: One include, one script, one stylesheet no p

MUST: One CTA per product card

MUST: Bag review before checkout no impulse redir

MUST NOT: Publish artifacts not reproducible from gover

MUST NOT: Process SPEND without sufficient buyer balan

MUST NOT: Inline CSS or JS in compiled pages

MUST NOT: Admin tools (vault commands) on public SHOP

MUST NOT: Per-page wallet reimplementation

MUST NOT: Multiple purchase buttons per product
