

STAR CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

STAR is your personal portal in the GALAXY INTEL + CHAT + COIN composed into a unified personal surface, TIMELINE joins the primitives.

hadleylab.org Governed Research. Every claim cited.

Contents

- **STAR_IS_PERSONAL_CLOUD** STAR is the governed personal cloud; GALAXY shows the organizational topology, STAR shows the personal topology, and every USER gets a STAR.
- **PRIMITIVES_COMPOSED** STAR composes all three primitives (INTEL + CHAT + COIN) and discovers the USERS GOV tree via magic scan, never hardcoded.
- **TIMELINE_IS_JOIN** TIMELINE is a read-only JOIN across existing event sources and never duplicates; the envelope is compatible with LEDGER .idf and VAULT TIMELINE.jsonl.
- **PERSONAL_DATA_AUTH_GATED** VAULT, WALLET, NOTIFIER, and CALENDAR are auth-gated; the GOV lane stays public because compliance rings are the product. ## Constraints

MUST: Compose all three primitives (INTEL + CHAT + COIN)

MUST: Discover USER's GOV tree via magic scan never hardcoded

MUST: TIMELINE is a read-only JOIN across existing event sources and never duplicates

MUST: TIMELINE envelope compatible with LEDGER .idf and VAULT TIMELINE.jsonl

MUST: Every lane WIRES to existing services never duplicates

MUST: Auth-gate all personal data (VAULT, WALLET, NOTIFIER, CALENDAR)

MUST: GOV lane is public (compliance rings are the product)

MUST: Discover services via magic scan (TALKS/*/CALENDAR)

MUST: Aggregate LEARNING patterns from all user sources

MUST: Surface compliance ring (8 MAGIC dimensions)

MUST: Publish STAR-TIMELINE.json via build pipeline

MUST: NETWORK service declare routes on api.canonic

MUST NOT: Write to source event streams (VAULT, LEDGER, WALLET, NOTIFIER, CALENDAR)

MUST NOT: Duplicate WALLET, SHOP, VITAE, or LEARNING services

MUST NOT: Hardcode lane sources discover via GOV tree

MUST NOT: Expose private data (VAULT, CALENDAR, NOTIFIER, WALLET)

STAR / CANON / SERVICES
