

TASK CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

TASK governs the remote agent fleet every scheduled agent a governed scope, every poll ledgered, every alert evidence.

hadleylab.org Governed Research. Every claim cited.

Contents

- **AGENT_IS_SCOPE** every scheduled agent is a governed scope declared via `## TASK Contract` in service `CANON.md`; discovery compiles into the registry.
- **RECONCILE_AGAINST_RUNTIME** compiled triggers reconcile against runtime state; budget controls enforce minimum intervals per agent.
- **READ_ONLY_BY_DEFAULT** agents are read-only unless the `TASK Contract` explicitly declares write scope. `## Constraints`

MUST: Discover task types via `## TASK Contract` in `s`
MUST: Compile discovered tasks to registry
MUST: Reconcile compiled triggers against runtime `s`
MUST: Budget-control frequency (minimum intervals `p`
MUST: All agents read-only unless `TASK Contract` de
MUST: Ledger every agent execution
MUST NOT: Maintain parallel task trees (services own t
MUST NOT: Hardcode trigger IDs in `GOV`
MUST NOT: Allow agents to modify files outside declare
