Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

VAULT compiles the private aggregate auth-gated, ledger-backed, discovered by walking VAULT.md across the tree.

hadleylab.org Governed Research. Every claim cited.

Contents

- **DISCOVERED_FROM_GOV** projections are discovered by walking VAULT.md files across the governance tree; VAULT aggregates, it does not own child scopes.
 - **AUTH_GATED_BY_DEFAULT** all projections are auth-gated by default; private projections are never exposed on public surfaces.
 - **DETERMINISTIC_AGGREGATION** aggregation is deterministic and rerun-safe; the same inputs produce the same VAULT every time.
- ## Constraints

MUST: Discover projections by walking VAULT.md files

MUST: Auth-gate all projections by default

MUST: Aggregation is deterministic and rerun-safe

MUST NOT: Expose private projections to public surfaces

MUST NOT: Contain child service scopes VAULT aggregates
