

SERVICES CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

SERVICES are SURFACE routes with governed boundaries they project GOV into runtime products without adding policy in code.

hadleylab.org Governed Research. Every claim cited.

Contents

- **SERVICE_IS_SURFACE_ROUTE** every SERVICES scope is a routed surface with a declared governed boundary; the route IS the contract.
- **NO_POLICY_IN_CODE** SERVICES project GOV into runtime products; policy lives in GOV, not in code, and is compiled down.
- **INTEL_IS_MANDATORY** every service composes INTEL; knowledge backs every operation, with CHAT and COIN optional primitives on top.
- **FILES_VS_DIRECTORIES** primitives are files, services are directories (INTELLEARNING, CHATTALK, COINSHOP); the shape is enforced, not suggested. ## Constraints

MUST: Every service composes INTEL (mandatory know
 MUST: Primitives are files, services are directories
 MUST: COIN is optional adds economics (the econom
 MUST: TALK is optional adds governed conversation
 MUST: NOTIFIER is optional adds governed cross-sc
 MUST: Treat each service scope as a governed bound
 MUST: Drive routes and UI from governed indices (n
 MUST: NETWORK services MUST declare Routes table w
 MUST: NETWORK services MUST declare Architecture s
 MUST: NETWORK services MUST declare Configuration v
 MUST: COMPILER services MUST declare Interface wit
 MUST NOT: Embed runtime state into governed scopes
 MUST NOT: Ship a service without declaring its API sur
 MUST NOT: All compiled JSON outputs carry _generated :
