

TALK CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

api.canonic.org is the CANONIC service worker all primitives, all streams, zero hardcoding, provider-switchable.

hadleylab.org Governed Research. Every claim cited.

Contents

- **WORKER_IS_UNIFIED** `api.canonic.org` is the single CANONIC service worker covering all primitives and all streams for DESIGN/TALK.
- **CLOUDFLARE_RUNTIME** the runtime is Cloudflare Workers; `canonic-services` is the worker name and the scope is DESIGN/TALK.
- **PROVIDER_SWITCHABLE** the LLM provider is switchable (`anthropic` / `openai` / `deepseek` / `runpod` / `vastai`); zero hardcoding of provider in the surface. ## Constraints

1. MUST route all services through `api.canonic.org`
2. MUST use wrangler secrets for all API keys zero hardcoding
3. MUST support provider switching via PROVIDER var
4. MUST validate CORS for all origins
5. MUST NOT expose secrets in responses
6. MUST govern every new route in this CANON.md
