

PAPERS CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

PAPERS are governed academic artifacts each paper IS a scope, every claim cited, every method reproducible.

hadleylab.org Governed Research. Every claim cited.

Contents

- **PAPER_IS_SCOPE** each paper is a scope; the .md source follows Abstract, TOC, Body, Appendices, References with declared front matter.
- **INTELLECTUAL_DISCLOSURE** a paper is a timestamped disclosure with verifiable structure; every claim is cited and every method is reproducible.
- **MD_COMPILES_ALL_SURFACES** the compiled surface renders TOC, figures, and math; PDF export hides LaTeX behind the same source. ## Constraints

MUST: Every paper declares front matter (title, date, authors, etc.)

MUST: Papers follow section structure: Abstract, TOC, Body, Appendices, References

MUST: PAPERS.json index is compiled from paper front matter

MUST: CANON.json is compiled never hand-edited

MUST: Paper content maps to governed work (LEDGER & CANON)

MUST: Math renders via LaTeX (KaTeX) formulas are data-driven

MUST: Figures are data-driven (JSON config, not inline code)

MUST: PDF export compiles from the same .md source

MUST: Papers with compiled PDF render all views (GitHub, PDF, WEB)

MUST: WEB view is 1-col scrolling (like blog posts)

MUST NOT: Hand-edit compiled outputs (PAPERS.json, CANON.json)

MUST NOT: Publish ungoverned claims (every assertion needs evidence)

MUST NOT: Embed presentation logic in paper source (DEVELOPMENT)
