

RUNTIME CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

RUNTIME is shared fleet primitives `talk.js` + `fleet.json`, JEKYLL compiles, `remote_theme` distributes.

hadleylab.org Governed Research. Every claim cited.

Contents

- **ONE_TALK_JS** one `talk.js` across the fleet; scope-specific INTEL is wired via `systemPrompt`, not forked code.
- **JEKYLL_IS_COMPILER** Jekyll is the compiler; no custom compilers are introduced at the runtime layer.
- **REMOTE_THEME_DISTRIBUTES** Jekyll `remote_theme` distributes DESIGN to all fleet sites; site-specific content is never hardcoded in shared assets. ## Constraints

MUST: One `talk.js` scope-specific INTEL wired via `systemPrompt`

MUST: Jekyll `remote_theme` distributes DESIGN to all fleet sites

MUST NOT: Hardcode site-specific content in shared assets

MUST NOT: Introduce custom compilers Jekyll is the compiler
