

TESTS CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

TESTS verify compiler correctness deterministic fixture tests over governed inputs produce expected JSON outputs.

hadleylab.org Governed Research. Every claim cited.

Contents

- **FIXTURE_IS_SELF_CONTAINED** every fixture is a self-contained scope with CANON.md + VOCAB.md + README.md; fixtures do not leak state.
- **DETERMINISTIC_COMPARISON** expected output strips volatile fields (`_generated` timestamp) so the comparison is deterministic.
- **FIXTURES_DISCOVERED_BY_WALK** the test runner discovers fixtures by walking, never from a hardcoded list; compiler regressions cannot reach deploy. ## Constraints

MUST: Every fixture is a self-contained scope with
MUST: Expected output strips volatile fields (`_generated`
MUST: Test runner discovers fixtures by walking n
MUST NOT: Allow compiler regressions to reach deploy
