

bin CANON

2026-03-18

Dexter Hadley, MD/PhD

Hadley Lab CANONIC

Abstract

bin is three engines, three tiers each axiom self-closes, and together they equal 255 = MAGIC.

hadleylab.org Governed Research. Every claim cited.

Contents

- **THREE_ENGINES_THREE_TIERS** three engines map to three tiers; each axiom self-closes with no infinite recursion and no external dependency.
- **EVERY_EXECUTABLE_GOVERNED** every executable is documented with purpose, inputs, and outputs; magic is the single source of dimension truth.
- **BUILD_DEPLOY_LEDGERED** every build validates via magic scan (255 or reject) and every deploy ledgers to LEDGER. ## Constraints

MUST: Every executable governed documented purpose
MUST: Every build validates via magic scan 255 or reject
MUST: Every deploy ledgers to LEDGER
MUST: magic binary is the single source of dimension truth
MUST: Each engine self-closes no infinite recursion
MUST NOT: Hardcode paths discover from governance tree
MUST NOT: Deploy without validation passing
